SPECIAL GUEST DESCRIPTIONS

Focus on Nature

Learn about the elements of design and digital photography basics. Take an exploratory photo walk and hunt for the 7 elements of design in nature. When you get back from your photo walk you'll learn to edit your photos and select and share your top shots with your fellow campers.

HoopOUT

A fun learning experience where we focus on cool tricks on and off body! A good giggle with friends and work on coordination, agility and spatial awareness! That's how memories are made!

Hands on Exotics brings the animal kingdom to you. Meet 2 different breeds of rabbits (including English angora, mini lop, flemish giant, dwarf, or lionhead), 1 chinchilla, 1 hedgehog or guinea pig, 1-2 other furries, 1-2 birds, and 1-2 reptiles or invertebrate. Specific animals are subject to availability on date of visit.

Explore some of the unique mechanisms of self-defence that reptiles, amphibians, mammals and invertebrates have evolved. Why are ferrets so flexible? What do tarantulas protect themselves from predators? Find the answers to these questions and more in this exploration of amazing animal adaptations and instincts.

Mad Science has developed science programs that are kid-tested and approved. They believe that hands-on, fun STEM experiences form the foundation of a lifelong love of science, technology, engineering, and math! Play with polymers and learn the basics of chemistry and how to make slime!

Dance Kids is an innovative program that provides a unique opportunity for children to explore what's new in dance and music. Explore one of our energetic FUN easy to learn dance moves consisting of Zumba, Hip Hop and Tik Tok Dances. Gym Bus classes take place on a retrofitted, 40ft school bus. The Bus is equipped with padded walls, climbing bars, ball pit, balance beam, rings, zip line, mini Trampoline, rock wall, single bar, and many other assorted gymnastics equipment.

Paint your own ceramic masterpiece with Play with Clay! Choose as many colours as you would like, use stencils sponges, and other techniques to add some awesome flare to your pottery.

STEMOTICS is a specialized robotics centre in Cambridge, Ontario. STEMOTICS will bring the fun to Kinbridge! STEMOTICS aims at providing children and youngsters with the right skills to expedite their learning, especially in STEM-related fields, and to express their creativity. STEMOTICS is about helping children explore their creative potential and to help develop their life skills.

Deconstruct salvaged toys – even working ones – and upcycle them into something new and awesome. There is no goal, no specific problem to solve and no design restriction – just an exploration of tools and materials. We work with scissors, screw drivers, hand saws, cordless drills and hot glue to invent the next best-selling toy.
